# About ORX

## Our role in the industry

Operational and non-financial risks are complex, interconnected and costly when firms address them in isolation. Across financial services, institutions face many of the same challenges, yet historically have learned from them separately. We exist to enable financial firms to learn from shared experience, reduce repeated mistakes and strengthen operational risk management collectively, rather than working in silos.

## Member-owned and not-for-profit

Owned and governed by our members, we operate on a not-for-profit basis, removing shareholder bias and aligning our work to long-term industry benefit.

Resources are reinvested into shared data, insight, research and standards that strengthen decision-making and resilience.

## Strengthening resilience and setting the standard for the industry

Our taxonomies, reference libraries, benchmarks and research are widely adopted to support consistent and effective risk management within the wider financial ecosystem.

## Established and practitioner-led

Founded in 2002 by banking sector operational risk professionals to exchange confidential loss data and develop common standards.

We have since expanded to support insurers and asset managers, addressing shared challenges across financial services. Our work continues to be shaped by practitioners, for practitioners.

## A global community shaping risk practice

A collaborative industry community representing over 140 financial firms worldwide, working together to advance risk practice and shape the discipline.

# About ORX News

## What is ORX News?

ORX News is a global intelligence subscription service delivered by ORX's specialist research team, providing verified operational and cyber loss events drawn from public sources and quality-assured against **ORX industry standards**, exceeding the ORX agreed reporting thresholds.

It is designed to support risk professionals in banking, insurance and asset management by helping them identify emerging non-financial risks, understand material incidents in context and support informed discussion with senior stakeholders, risk committees and boards.

## Who can become an ORX News subscriber?

ORX News is open to financial institutions (unlimited number of users per firm) operating in the banking, insurance and asset management sectors that require reliable external intelligence to support their operational and non-financial risk frameworks.

Subscribers use ORX News to complement internal loss data, support horizon scanning, scenario development, stress testing, internal reporting and executive briefing.
